Background

To be effective, organisations must put in place a system by which health and safety is managed in the same way as all other aspects of the business. Not only is this the philosophy underlying all EU legislation and standards but experience has shown that by adopting such an approach there are financial and motivational benefits for the organisation.

We understand that no two organisations are the same so we aim to work with our clients to help them develop a system which achieves these benefits whilst reflecting their individual culture.

OBJECTIVES

The specific components of the health & safety management system would include:

- Development of your health and safety policy.
- Establishment of an internal organisation to implement & maintain the policy.
- Development of a process for setting and measuring health and safety objectives.
- Developing a communication strategy.
- Embedding a risk assessment process to establish and maintain appropriate controls.
- Identifying training needs.
- Setting performance measures including both leading & lag indicators.
- Establishing an audit process to ensure that the system continues to be appropriate for the business.

TOPICS

- Initial review of existing systems.
- Preparation of action plan to be agreed with the client.
- Responsibilities for implementation would be agreed.
- We would provide support where required throughout the implementation process.
- Provision of the training which has been identified.
- Periodic monitoring of progress.

DURATION

The project would be scoped out in association with the client and the duration of the project and its stages would be agreed.

COST

Following the scoping exercise, a fully costed proposal would be prepared. Please contact Cardinus for details.
