Background

This practical workshop will introduce the participants to the key components of an effective emergency plan. It will provide them with the opportunity to practice building such a plan and allow them to develop a draft plan for their own facility under supervised conditions.

Although robust risk assessments may be carried out, and control measures implemented to reduce risks, there is always a residual probability that an event might occur. Should this happen an organisation should have a well-developed and practiced emergency plan that can be activated immediately. In many incidents we have seen the benefits of such a plan; in others we have seen the lack of such a plan lead to major loss or even the company going out of business.

OBJECTIVES

On completion of this course you will:

- Understand the key elements of an effective emergency plan.
- Be able to participate in the development of such a plan.
- Be able to identify those risks which could give rise to a major emergency.
- Understand critical factors arising from the plan.
- Produce a draft emergency plan for your facility.

TOPICS

- What is an emergency?
- How can we identify those risks which can give rise to major impacts.
- What are the key elements of an effective emergency plan.
- Identifying roles and responsibilities.
- Documenting the emergency plan.
- Communicating the emergency planning.
- Reviewing the emergency plan.
- Dealing with the media..
- Rehearsing the emergency plan.
- Case study emergency plan.
- Preparing a draft emergency plan for your facility.

DURATION

This is a two day practical workshop.
