

Ergonomics Management

Managing your ergonomics risk can be time-consuming and costly.

Business pressures often make it difficult to get financial commitment for an ergonomics program to keep your employees safe and free from discomfort. However, with an effective, efficient and cost sensitive model, you can not only get management support, you can provide a measurable return on investment.

Cardinus and partners have been developing a comprehensive suite of ergonomic services that deliver measurable results at the lowest cost possible since 1996.

Innovations in our processes include virtual assessments, on-site assessments and case management services. These services are designed to mitigate risk at the earliest (and therefore cheapest) opportunity. Your employees feel their health and well-being is properly invested in.

E-learning and self-assessment

E-learning is widely recognized as the most efficient way of delivering ergonomics assessment and training. The Healthy Working system (e-learning and self-assessment) is the world's most widely used office ergonomic software.

Healthy Working specializes in empowering your employees to take ownership of their risk and mitigate it where possible. Using advanced features it provides self-help modules that generate substantial results.

60% of employees will be able to resolve risk and adjust their workstation without any additional support. However, when additional support is needed, Cardinus and our partners can deliver with tiered assessment and management services.

Virtual assessments

Cardinus and our partners have spent many years fine-tuning a virtual assessment process that delivers incredible results and enjoys the support of employers and employees. Using trained experts who have full access to the data gathered during the self-assessment process and who understand your equipment protocols, employees are coached using a combination of web meeting technology and telephone support, our ergonomists will be able to help an employee resolve their risk, coach them through a web cam, and provide a report with specific equipment and ordering recommendations. Our virtual assessors will analyze the data using the unique Cardinus information management engine, PACE. All virtual assessment details will also be recorded in PACE, ensuring you have a complete audit trail.

Using their wealth of experience and knowledge, our experts will be able to solve most problems virtually at a fraction of the cost of an on-site session.

ERGONOMICS MANAGEMENT

On-site assessments

While the combination of software and virtual assessments resolve 90% of cases. Occasionally a case requires an on-site assessment.

Cardinus and our partners have over 150 ergonomists spread throughout the US and most major countries.

Using our services we handle the whole process, from setting up an appointment, to ensuring that the risk is fully assessed, that the recommendations are appropriate, and that follow up communications are scheduled to confirm resolution.

Full reports are provided for your employees, managers and anyone involved in the ergonomics process.

Case management

Although most risk will be dealt with using the processes above, we will occasionally identify an employee with an injury that needs specialist assessment. We can provide full case management services to support your employee through injury, reasonable accommodation or any case that requires specialized service.

Ergonomics assessor training

Cardinus and our partners can provide ergonomic assessor training to help you to manage your own internal ergonomic cases. Our trainers can show your staff how to conduct assessments and reap the benefits of a well- managed and proactive ergonomics program.

Specialist ergonomics services

We're not just about office ergonomics. Our qualified ergonomists are able to provide specialist ergonomics services including workplace design, materials handling, industrial ergonomics and driver ergonomics assessments. Contact us today to discuss your specific requirements.

End-to-end solutions

Whether you need someone to manage your software system, provide virtual or on-site assessments, or deliver specific case management solutions, we can help. Call us today to determine how our cost effective and efficient services can transform your ergonomics program.
