

# Safe Driving Plus

More people than ever are driving for work. New types of business and changes to the way we work mean that an increasing number of companies are exposed to occupational road risk. The behaviour of drivers on your behalf could represent a significant threat to your company's performance and reputation. Everyone driving for your business should be assessed and given training appropriate to their needs.

**Safe Driving Plus from Cardinus Risk Management helps you to meet your duty of care to drivers and other road users in an efficient, cost-effective way. It constantly reinforces key safety messages and fleet policies using established learning methods. It results in better awareness of the issues and noticeable behaviour change among your drivers.**

## Pre-training risk assessment

Safe Driving Plus features a built-in self-assessment module designed to help identify and provide additional help to drivers exposed to higher levels of risk. Drivers who score well in the risk assessment might not need additional training, saving them time and you money. Each user's risk assessment data is stored in PACE, a powerful risk management database unique to Cardinus, where it can be easily managed by you and your management team.

Following the completion of the risk assessment, the User Action Report empowers your drivers to take direct responsibility for any issues. Based on the risk assessment and User Action Report, drivers will undertake e-learning or be recommended for in-vehicle driver awareness training.

## Online e-learning

The training helps your 'at work' drivers to drive more safely, reducing their risk of being involved in an accident. The informative modules engage with your drivers, using a combination of interactive sequences, tests and quizzes to ensure long-term knowledge retention.

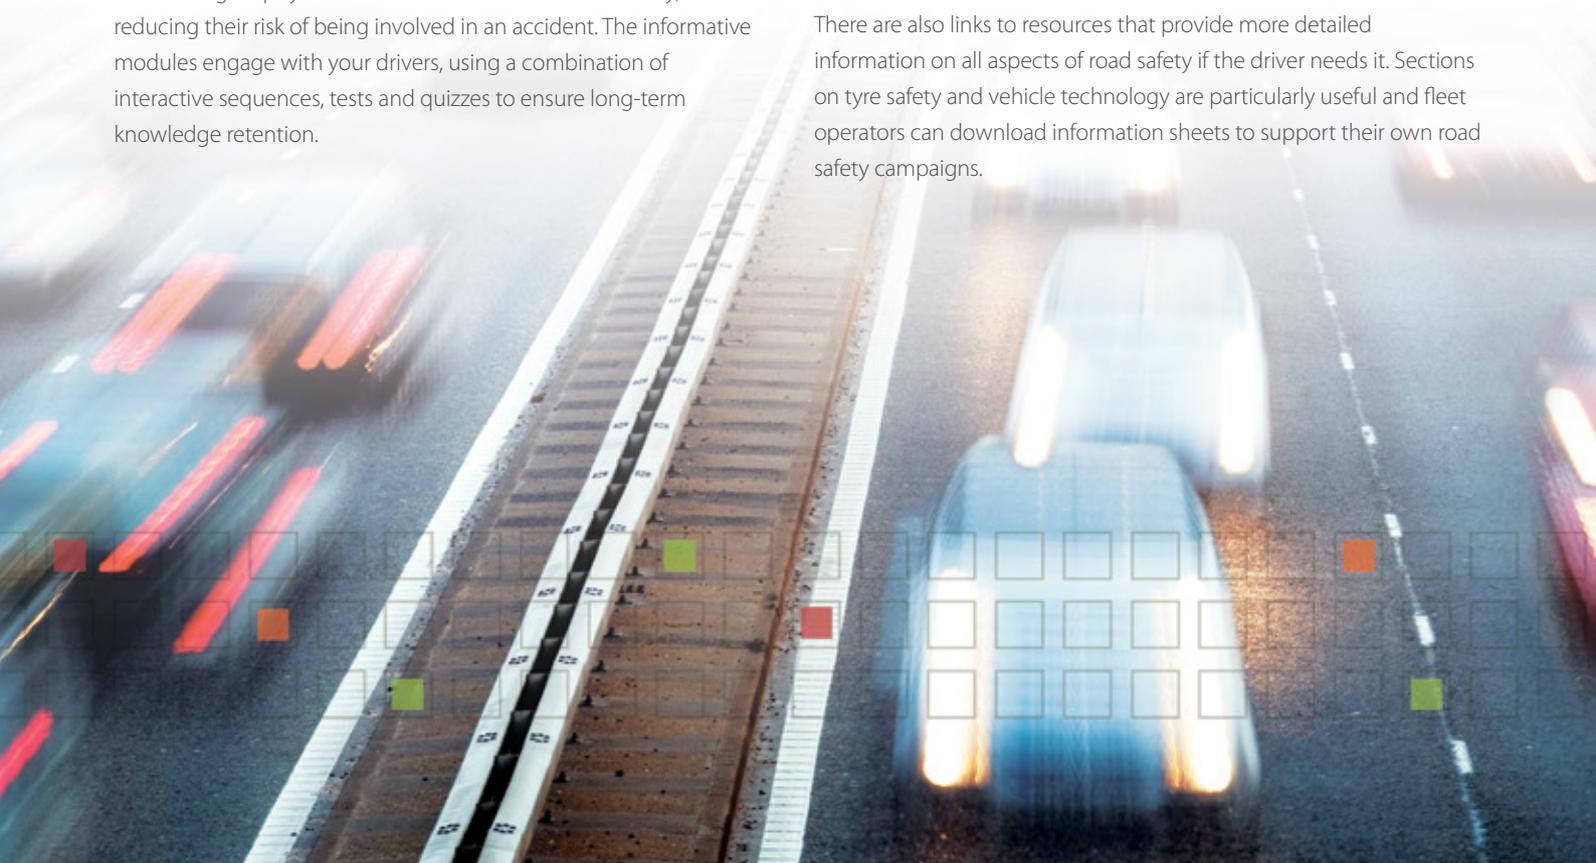

The process is conducive to fast learning. On completion of the 20-minute e-learning programme your drivers will have a better understanding of:

- the risks they are exposed to when driving on business
- what measures they can take to reduce this risk
- how the law applies to company drivers.

E-learning content in Safe Driving Plus looks at real-world risk scenarios. It focuses on how drivers really drive and when they are most likely to face difficulties.

Safe Driving Plus features many multimedia sections, including interactive video and animations, designed to make the learning experience more engaging and enjoyable. Images, videos and animated reconstructions provide drivers with the best possible safe driving experience from their screens.

There are also links to resources that provide more detailed information on all aspects of road safety if the driver needs it. Sections on tyre safety and vehicle technology are particularly useful and fleet operators can download information sheets to support their own road safety campaigns.

# SAFE DRIVING PLUS

### Modules include:

- Setting the scene.
- Is your vehicle safe and legal?
- Is low speed low risk?
- Avoiding the common collision situations.
- Understanding what you see.
- An interactive test to check key learning points.

### In-vehicle driver awareness training

The in-vehicle trainer will help higher risk drivers, identified in the risk assessment, to develop the strategies required to improve risk perception and decision-making.

### Learning objectives:

- To identify behaviours/practices leading to loss or injury.
- To introduce 'best practice' coaching appropriate to all sources of identified risk.
- To reinforce the competence of existing behaviours/practices (strengths).
- To improve fuel economy and extend component life.
- To determine areas where further support/training may be necessary.

At the end of each session the trainer will provide each participant with a risk profile that will highlight the strengths and risk factors identified during the drive, note any progress made and pinpoint areas that require further attention.

Sessions are normally conducted on either a one-to-one (half-day), or two-to-one (full day) basis. Cardinus will arrange to meet your drivers wherever they are located.

### PACE information management system

All Cardinus Risk Management e-learning has its data managed by PACE. PACE integrates the management of online training with powerful risk assessment reporting and action plans. The software is delivered over the internet and requires no software or plug-ins to be installed on the clients' computers.

Following the collection of data, reports with statistics, graphs and action plans can be printed. PACE enables safety administrators to rapidly identify important issues and take appropriate actions. The software includes built-in risk scoring so that outstanding issues are automatically prioritised.

PACE is just one of the many unique features that make Safe Driving Plus from Cardinus outstanding in its field.
